New DoTi Bike Connect

PROFESSIONAL TRACKING SYSTEM OF THE NEW GENERATION

The best in theft protection

The New DoTi Bike Connect is a new generation geolocation system. It combines the best of GPS and GSM technology in a waterproof case (IP67). Its small size makes it easy to conceal and integrate the GPS tracker into a motorbike.

The New DoTi Bike Connect is equipped with an engine cut-off controlled via the mobile application. It also has an output to control an accessory and an input to connect the GPS tracker to an alarm. Thanks to its high capacity battery, the New DoTi Bike Connect allows the tracker to operate autonomously (without power supply) for up to 30 days (at a rate of 4 positions/day). In standby mode, the New DoTi Bike Connect consumes less than 1mA of power.

« THE NEW DOTI BIKE CONNECT, IS THE NEW REFERENCE IN MOTORBIKE THEFT PROTECTION »
